## ABSTRACT

---

The concept of study management according to the National Study Plan, based on the key principles of study management, consists of: Principles of Education Management for The Nation Principles of Education Management for Equality and General. The philosophy of sufficiency economy and the principle of participation in all sectors of society. It also adheres to sustainable development goals. Domestic issues such as the quality of people of all ages. Changes to the country's population structure Inequality of income distribution and environmental crisis. The national strategy is a key framework for the creation of a national education plan from 2017 to 2036, and the findings in the study's quality plan have also found that the development results are not satisfactory, as the basic academic achievements are significantly lower than average and lower than many Asian countries (Office of the Education Council, 2017). From that plan, Education is extremely important and must continue to develop across all dimensions.
